Schleicher USP2I

2-Axis Positioning Processor

XCx 700 | Product identification and purchasing

01 / EXACT PRODUCT IDENTITY

USP2I
R4.315.0020.0
XCx 700

Use the USP 2I designation and article R4.315.0020.0 together. Retain the installed encoder wiring, control-unit program and module revision for replacement.

02 / Function and configuration

Schleicher USP2I is a slave positioning processor for two independent axes using incremental encoders. It exchanges control data over the system bus through dual-port shared RAM and supplies analog drive setpoints.

For replacement: include the complete article, controller, encoder type, drive interface and installed program revision.

03 / Supply and quotation information

Condition: New | **Supply:** Positioning module only
Dispatch: Ready to ship; confirm quantity and destination.
Warranty: Amikon one-year supplier warranty under written terms.
Encoders, servo drives, receiving controller, rack and separate cables are outside the module-only supply.

Include the complete model, quantity, destination, required delivery date and installed label photographs.
